

BACT/ALERT 3D™

*Specific colorimetric
technology with visual
positive signal.*

Being first, being smarter

A smart and modular design makes BacT/ALERT® 3D the most compact automated microbial detection system around.

Introduced in 1990, over 10,000 BacT/ALERT systems have been installed worldwide to perform blood culture, body fluid culture and/or mycobacterial testing.

The same user-friendly approach for data management ensures optimum flexibility

BACT/ALERT® 3D offers you the data management option which best suits your unique laboratory organization. Each option has virtually the same graphical, text-free, touch-screen user interface.

Select™

The standard solution for routine microbial testing where sophisticated data management and Laboratory Information System (LIS) connectivity are not needed.

SelectLink™

The ideal solution for routine microbial testing where a bi-directional LIS interface is required to exchange patient data and results.

Signature™

The high-performance solution when extensive data management capabilities are required. This is possible through the LIS interface and the OBSERVA® software package.
